(Para Summary)
Concept Builders

Directions for questions 1 and 2: Summarize the essence of each text in not more than 20 words.

1. Yes, that dog is moving, but not that tree. Plants don't move. Well, yes, they actually do. Trees grow and then they decay. Which means it *is* happening now, just not in a way that matches our frame. Getting our time scale right is essential. It affects how we perceive the growth of our organization, or the changes in our planet. It changes the way we invest in education and how we react or respond to the news media.

_____

_____

2. Inspections are essential to maintain quality, but re-inspection is duplicative and slows things down. Where is the best place to be sure you've done the work properly? Do it there and then, and not again, and not five times. Organizing to build quality into the process, with steps that check themselves, is far more productive than constant task switching and over-inspection.

_____

_____

Directions for questions 3 to 5: Select the better summary for each of the following texts.

3. Analogical language holds a place between the abstract contraries of metaphysics and the concrete imagery of poetic imagination. Analogical language is a matter of degree, as when one says that love comes in many forms, but the eminent form of love belongs to God. Psychical predicates such as memory, feeling, and volition admit of an infinite variability, extending beyond their specifically human forms to include the non-human animal world and to include what might exist in a superhuman form, such as deity. These sorts of predicates only apply literally to God and not the creatures.
   A] The analogical language is relative in nature and useful to go past the finite and to describe a feeling such as love in relation to God.
   B] Psychical predicates such as memory, feeling, and volition admit of an infinite variability.

4. We often believe what we are told by our parents, friends, doctors, and news reporters. We often believe what we see, taste, and smell. Do we have a right to hold any of these beliefs? Are any supported by evidence? Should we continue to hold them, or should we discard some? These questions are evaluative. They ask whether our beliefs meet a standard that renders them fitting, right, or reasonable for us to hold. One prominent standard is *epistemic justification*. *Epistemic* justification (from *episteme,* the Greek word for knowledge) is the right standing of a person's beliefs with respect to knowledge.
   A] *Epistemic* justification, the right standing of a person's beliefs with respect to knowledge, is a prominent standard for evaluating the reasonableness of our beliefs.
   B] Evaluative questions, that ask whether our beliefs meet a standard that assures their fit and reasonableness, are necessary to validate our beliefs.

5. Christian thinkers, from early times, realized that there is a tension between the belief in the goodness of God and the denial that God somehow shares in the joys and sorrows of the creatures. Divine relativity is precisely what much of traditional theology would not allow. God is really related to the creatures but the creatures have only a rational (imagined) relation to God. In short, God is impassible or unaffected by anything external. The only doctrine of divine love consistent with the doctrine of impassibility is one in which God promotes the welfare of the creatures, but is unaffected by what happens to them. On this view, divine love, unlike human forms of love, involves neither sympathy nor empathy.
   A] God is really related to the creatures but the creatures have only a rational (that is, an imagined) relation to God. In short, God is impassible or unaffected by anything external.
   B] The only doctrine of divine love consistent with the doctrine of impassibility is one in which God promotes the welfare of the creatures, but is unaffected by what happens to them.

(Para Summary)
CLASS SHEET L1

Time: 25 minutes

ALL questions in CLASS SHEET are to be discussed in the class; no solutions will be provided for the same. You may discuss the doubts etc. of the Home Sheet in the next session.

Directions for questions 1 to 10: Four alternative summaries are given below each text. Choose the option that best captures the essence of the text.

1. You seemed at first to take no notice of your school-fellows, or rather to set yourself against them because they were strangers to you. They knew as little of you as you did of them; this would have been the reason for their keeping aloof from you as well, which you would have felt as a hardship. Learn never to conceive a prejudice against others because you know nothing of them. It is bad reasoning, and makes enemies of half the world. Do not think ill of them till they behave ill to you; and then strive to avoid the faults that you see in them. This will disarm their hostility sooner than pique or resentment or complaint.

   A] The discomfort you felt with your school fellows was because both sides knew little of each other. You should not complain unless you find others prejudiced against you and have attempted to carefully analyze the faults you have observed in them.

   B] The discomfort you felt with your school fellows was because both sides knew little of each other. Avoid prejudice and negative thoughts till you encounter bad behaviour from others, and then win them over by shunning the faults you have observed.

   C] You encountered hardship amongst your school fellows because you did not know them well. You should learn to not make enemies because of your prejudices irrespective of their behaviour towards you.

   D] You encountered hardship amongst your school fellows because you did not know them well. You should learn to not make enemies because of your prejudices unless they behave badly with you.

2. The human race is spread all over the world, from the Polar Regions to the Tropics. The people of whom it is made up eat different kinds of food, partly according to the climate in which they live, and partly according to the kind of food which their country produces. In hot climates, meat and fat are not much needed; but in the Arctic regions they seem to be very necessary for keeping up the heat of the body. Thus, in India, people live chiefly on different kinds of grains, eggs, milk, or sometimes fish and meat. In Europe, people eat more meat and less grain. In the Arctic regions, where no grains and fruits are produced, the Eskimo and other races live almost entirely on meat and fish.

   A] Food eaten by people in different regions of the world depends on the climate and produce of the region, and varies from meat and fish in the Arctic to predominantly grains in the tropics.

   B] Hot climates require people to eat grains while cold regions require people to eat meat and fish.

   C] In hot countries people eat mainly grains while in the Arctic, they eat meat and fish because they cannot grow grains.

   D] While people in Arctic regions like meat and fish and those in hot regions like India prefer mainly grains, they have to change what they eat depending on the local climate and the local produce.

3. Has there been a better performance by a Pakistani batsman in Australia, that too by an opener? Azhar Ali's evolution over this last year, in which he has had to assume opening duties, has been one of Pakistan's happiest gains. In Australia he was outstanding, not least with the MCG double in which his straight-driving, in particular, reached heights he has never hit before. He looked good for another big one in the first innings in Sydney until cut short by poor running. But by series end, he was the wicket Australia wanted most - no Pakistani less deserved to be whitewashed.

A] It has never been easy for Pakistani openers to perform well in Australia before Azhar Ali changed this with total domination of Australian bowling attack.

B] Azhar Ali has been a reluctant opener who has evolved over the past one year and become the cornerstone of Pakistani batting.

C] Azhar Ali, having evolved as a batsman, has delivered a superb performance as an opening batsman for Pakistan against Australia, earning the respect of the opposition in the process.

D] Azhar Ali's performance as an opening batsman for Pakistan has been not only his best so far, but the best by a Pakistani opening batsman in Australia.

4. For a player who never much cared for records, it's perhaps apt that Virender Sehwag has finished his Test career with an average that is marginally short of 50. His fans will probably fret about it; his critics will probably use that fact to highlight his flaws; but Sehwag himself won't care. Throughout his career, he never played for milestones, and yet he racked up some pretty impressive numbers over an international career that lasted more than a decade.

A] For the carelessness displayed by Sehwag during his career, it is apt that he finished with a Test career average carelessly short of 50.

B] Sehwag achieved impressive career numbers even though he never worried about milestones considered important by fans and critics alike.

C] Sehwag always left his fans wanting more, ending his career tantalizingly short of 50 as his Test career average.

D] Unlike other batsmen who worry about milestones, Sehwag played carefree cricket and notched up impressive numbers over a decade long Test career.

5. 'How did you relax on Sunday?' 'What was your last holiday like?'
Simple though these questions sound, your next job might depend on how you answer them. And it won't be a human you're talking to, but a computer.
Instead of the usual laborious online questionnaires or psychometric tests, some recruiters are asking job candidates to call a phone number, key in a personal pin code and respond to a string of questions posed by a computer. Mind gone blank? Press the hash key to skip to the next question. As long as you don't sing, rap or simply read aloud, *what* you say doesn't matter. It's *how* you say it.

A] *How* you answer is always more important than *what* your answer is.

B] Some recruiters are exploring novel technological techniques to assess suitability of candidates.

C] The recruitment process for many firms is getting simplified as laborious online assessments are being replaced by simple routine questions.

D] The role of computers in recruitment process is changing the way in which the candidates are examined for suitability of various jobs.

6. Plants, according to Jack C Schultz, "are just very slow animals". This is not a misunderstanding of basic biology. Schultz is a professor in the Division of Plant Sciences at the University of Missouri in Columbia, and has spent four decades investigating the interactions between plants and insects. He knows his stuff. Instead, he is making a point about common perceptions of our leafy cousins, which he feels are too often dismissed as part of the furniture. Plants fight for territory, seek out food, evade predators and trap prey. They are as alive as any animal, and – like animals – they exhibit behaviour.

A] Plants are not non-living pieces of furniture we often treat them as.
B] Plants display characteristics strikingly similar to those of animals, albeit much slowly.
C] The only difference between plants and animals is the pace at which they respond to the environment.
D] Sometimes, a peripheral understanding of basic biology can lead to misplaced conclusions.

7. Shams-ud-din Muhammad Hafiz (c. 1320-1389) is one of the most beloved poets of the Persians, and is considered by many – from different cultures – to be one of the seven literary wonders of the world. Ralph Waldo Emerson and Johann Wolfgang von Goethe both agreed. As Emerson said of Hafiz: "He fears nothing. He sees too far, he sees throughout; such is the only man I wish to see or be." And Emerson gave Hafiz that grand and famous compliment, "Hafiz is a poet for poets." Hafiz's poems were also admired by such diverse notables as Nietzsche and Arthur Conan Doyle, whose wonderful character Sherlock Holmes quotes Hafiz. Garcia Lorca praised the Sufi poet. Johannes Brahms was so touched by his verse, he used several in his compositions. And even Queen Victoria was said to have consulted Hafiz in times of need.

A] Hafiz was a poet not only much loved by the Persians, but also hugely admired by eminent artistes from different cultures.
B] Hafiz was a much-admired Persian poet, whose advice was sought by even Queen Victoria.
C] Hafiz was a poet with a great foresight and imagination, much admired by the elite and the masses.
D] Hafiz was considered to be one the seven literary wonders of the world.

8. The DB11 costs £154,900 in the UK and there is nothing sensible about spending that much on a car, and very little point in making sensible comparisons with other such moments of conspicuous consumption – fuel efficiency and cargo capacity and such. For a buyer with the means and the motivation, there is nothing I could possibly write that will dampen enthusiasm for the DB11. Candidly, I find it difficult to contain my open admiration for the car, which is poor motoring journalism, at best. I am inordinately fond of it, all of it, and that makes presenting a balanced, consumer-serving review really tough. With deference to James Bond, who for 50-odd years has employed Aston Martins as work vehicles, these are not cars designed to serve any real purpose beyond pleasure. "For the love of beautiful" is a phrase evoked more than once by Aston's head of design, Marek Reichman, during my time with the DB11 and the Gaydon entourage (in Tuscany, if you must know). It's a phrase that guided the creation of the car – all of it, not just the exposed bits. And it shows.

A] The reviewer is inordinately fond of the DB11, and that makes presenting a balanced, consumer-serving review really tough for him.
B] You will find it tough to overcome your admiration for the beauty of the car and hence, in making comparison of its useful specifications with other cars.
C] Designed as an exquisite piece of machinery, the extremely expensive DB11 is inexplicably enticing for those with the means and the motivation.
D] Beauty can make one blind to the more objective parameters of comparison.

9. Many economists had predicted that a vote to leave the EU would tip Britain into recession. Instead, after six months, the UK is on track to be the fastest growing economy in the G7. Orders in the manufacturing sector are expanding at the fastest rate in 25 years. Consumers are acting "almost as though the referendum had not taken place" asserts Andy Haldane, the Chief Economist at the Bank of England. The economic forecasters are on the defensive or taking a turn in the confessional, admitting that the forecasting profession "is to some extent in crisis". There have been times in the past when politicians have urged voters to go out and spend, almost as if shopping was a patriotic duty. In recent months, the British consumer has needed no urging.

A] Britain has gained more than what it has lost by leaving the EU.

B] The vote to leave the EU has brought about a pleasantly surprising uptick in the British economic activity, leaving the Government and the economic planners lost for words as even the usual stimulus hasn't been required.

C] Economic forecasters are facing the heat as their future is jeopardized with the unexpected bounce-back in the British economy.

D] The robust pace and wide-base of economic activity in Britain, following its recent vote to leave the EU, has embarrassed several economic forecasters who had predicted a recession as a consequence.

10. It's easy to poke fun at prissy parental responses but take a closer look at Dahl's writing for children, and you'll find something to offend almost everyone. If he was a bigot, he was an equal-opportunities bigot. Teachers tend to be villainous, and even when benign, fail to impart any real wisdom. Charlie and the Chocolate Factory's Oompa Loompas were originally depicted as small black pygmies with warlike cries. Female characters tend to be either warm or wicked with nothing in between, while Revolting Rhymes brands Cinderella, that fairytale girl-next-door, "a dirty slut".

A] The formal responses of parents to Dahl's writing for children are absurd as they do not take into account that he was fair in being offensive to almost everyone.

B] The prudish responses of parents to Dahl's writing may seem laughable, but are not without basis as his writing, particularly the way he depicted some characters, was offensive to almost everyone.

C] Dahl's real personality of an unrelenting bigot was masked behind his eloquence as a writer for children.

D] For a writer who wrote for children, Dahl was surprising offensive, extremist and crude in his depiction of various characters.

(Para Summary)
CLASS SHEET L2

Time: 40 minutes

ALL questions in CLASS SHEET are to be discussed in the class; no solutions will be provided for the same. You may discuss the doubts etc. of the Home Sheet in the next session.

Directions for questions 1 to 20: Four alternative summaries are given below each text. Choose the option that best captures the essence of the text.

1. A number of essays, articles and books all argue that the CIA had somehow manipulated Abstract Expressionism. In 1999, the British journalist and historian Frances Stonor Saunders published a book about the CIA and the "cultural Cold War" in which she asserted: "Abstract Expressionism was being deployed as a Cold War weapon. In the manner of a Renaissance prince – except that it acted secretly – the CIA fostered and promoted American Abstract Expressionist painting around the world for more than 20 years". We know that the CIA bankrolled cultural initiatives as part of its propaganda war against the Soviet Union. It did so indirectly, on what was called a "long leash", via organisations such as the Congress for Cultural Freedom (CCF), an anti-Communist advocacy group active in 35 countries, which the CIA helped to establish and fund. It was the CCF that sponsored the launch of Encounter magazine in 1953, for instance. It also paid for the Boston Symphony Orchestra to travel to Paris to participate in a festival of modern music. These articles, essays and books basically argue that Abstract Expressionism was "a form of benevolent propaganda", in sync with the post-war political ideology of the American government.
   A] Several articles have revealed details about the covert "cultural cold war" propagated by the CIA through Abstract Expressionism.
   B] The CIA fostered and promoted American Abstract Expressionist painting around the world for more than 20 years and bankrolled cultural initiatives as part of its propaganda war against the Soviet Union.
   C] It has now been revealed through various essays, articles and books that the CIA established and funded organizations such as the CCF, an anti-Communist advocacy group active in 35 countries.
   D] Several essays, articles and books argue that Abstract Expressionism was "a form of benevolent propaganda", in sync with the post-war political ideology of the American government.

2. Men hold three-quarters of academic posts in philosophy. Why are there so few women? Institutional and public sexism has subsided; implicit bias doubtless remains, but can be overcome. The adversarial style of philosophical debate may be a factor. But the bigger message may be that philosophy has made itself into a marginal pursuit. Looking from without, women conclude "that they could be doing something better with their lives".
   A] Philosophy requires debate and the combative nature of philosophical debate is more suited to men than it is to women.
   B] Despite possible removal of traditional road-blocks such as public sexism and implicit bias about the suitability of women for pursuit of philosophy, men still dominate the academic posts in the field of philosophy.
   C] As is evident from the diminishing number of women in academic posts in philosophy, it is clear that it has devolved into a marginal pursuit for them.
   D] While there maybe some biases and impediments in the way of more women pursuing philosophy academically, the main reason is perhaps their not considering it to be a pursuit worthy of their time.

3. When we think about art at the end of the 19th Century, who and what comes to mind? Monet and Impressionism, certainly. Toulouse-Lautrec at the Moulin Rouge, perhaps. Post-Impressionism, of course: Cézanne and his heavy-set cardplayers or Mont Sainte-Victoire shimmering on the horizon, magnificent and majestic; Gauguin in his Tahitian paradise; or the last ravishing landscapes of Van Gogh, who died just as the last decade of the century was getting into its stride. But when we think of the art that's actually characterised as the art of the *fin de siècle*, the end of the century, particularly during the last decade of that century, the mood changes, and it darkens. We think of the art of anxiety and angst, of drama and febrile tension, of an acute sense of alienation. And it's all as far removed from Monet's sun-dappled garden at Giverny as you can get.

A] While the artists at the end of the 19th century bring positive emotions and visuals to mind, the art that charaterises that period is full of darkness, anxiety, angst and loneliness.

B] The art specifically characterized as the last decade of the 19th century is extremely sad and dull as compared to the art towards the end of the 19th century.

C] The positive images of the art and the artists that spur to mind when we think about art at the end of the 19th century are in absolute contrast to the dark and dreary art that's characterized as the art of that period.

D] The mood reflected in the art that is characterized as the art of the last decade of the 19th century was extremely different as compared to the art and the artists that come to mind when we think about art at the end of the 19th century.

4. A lot of Pixar films come packaged with a quasi-humanist narrative hook that enables the public digestion of their work. Viewers nodded thoughtfully over *WALL-E*'s depiction of a future earth choked by the refuse of big-box retail, and of a human race infantilized and rendered obese by mindless consumption, while *Brave* was the first Pixar film to feature a female protagonist—a simple gesture, the long-overdueness of which did not do very much to diminish murmurs of appreciation. Pixar's latest film and fifteenth feature, *Inside Out,* arrives with at least three female-coded lead roles, and an apparently sincere desire to render with sensitivity the interior life of a young girl. Pixar has created a stable of films for children that is founded on narratives of self-actualization – of characters branching out, embracing freedom, hitting personal goals, and living their best lives. But this self-actualization is almost exclusively expressed in terms of labor, resulting in a filmography that consistently conflates individual flourishing with the embrace of unremitting work.

A] While Pixar's films extensively use apparent welfare of humanity and stories of self-actualization to find audience approval, they strongly fuse the idea of individual fulfillment almost solely with toil and labor.

B] Pixar is one of the most innovative children-film making enterprise with a focus on making films with a quasi-humanist narrative hook that makes them popular.

C] Pixar makes children films built on long overdue ideas – such as the use of a female lead – and engages viewers through thoughtful depiction of issues that plague humans at large.

D] While Pixar's films for children are built around stories of self-actualization with a sincere and sensitive portrayal of human issues that engage the target audience, they also bring forth the idea of individual fulfillment through toil and labor.

5. YOLO is the antidote to FOMO. They are the two guiding principles of our time, the time after God's death. Drunk on the idea that we are free and rational individuals – God caught his robe in a spinning jenny some time during the industrial revolution and lies mangled among the cogs and gears – we think that our destinies are up to us. And we only live once, because we don't believe in heaven, so we must ensure that we do not miss out. YOLO and FOMO: our Castor and Pollux. None of that is true. We love historical explanations for inexplicable feelings, and the above is a good example of a story defining an emotion according to its place in culture. This story suggests that worry is a specially modern feeling, specially *ours*, because people in largely secular societies have to take full responsibility for their choices. As Austen's heroines swooned because their corsets were too tight and bad weather enraged the underclass of eighteenth-century France, we are worried because we are too free.

A] The two guiding principles of our times are based on the idea that we are free and rational individuals, which we are.

B] The two guiding principles of our times are based on the idea that we are free and rational individuals, which we are not.

C] Our desire to explain baffling feelings such as worry through historical reasons and in a cultural context is built on the misplaced belief that we are free and rational individuals, with complete control over our behavior and destiny.

D] Our desire to explain baffling feelings such as worry through historical reasons and in a cultural context is built on the belief that we are free and rational individuals, with complete control over our behavior and destiny.

6. Directly after and consequent to the First World War, the self-help manual market exploded, presumably because everybody in Europe was dead or traumatized. It had become a world of Dick Heldars. As worry began to appear on the bookshelves, it was ironically clear that it was here to stay. If self-help books worked to banish worry, one generation of them should have been enough. Take William S. Sadler's *Worry and Nervousness or The Science of Self-Mastery* (1914), an early and little-remembered self-help volume. Sadler defines "chronic fear," – i.e., worry – as "a purely psychic condition characterized by inability to relax the attention when it has once fastened itself on a given idea—usually a persistently entertained fear of some sort." Strangely paradoxical stuff, and not very helpful either. Rather than offering practical strategies Sadler seemed to think that, if one could understand what ailed you, you might find relief.

A] Self-help manuals are rarely useful as can be seen from the several that flooded the bookshelves across the world after the First World War.

B] The self-help manual market in Europe exploded as a result of the trauma of the first world war, but these books were of little practical use in eradicating worry.

C] As worry began to appear on the bookshelves after the first world war, it was ironically clear that it was here to stay.

D] Self-help books are rarely useful as they focus on the ailment rather than the cure thereof.

7. There are 2.5 million stars in my pocket – stored in the SkyVoyager app, and mapped instantaneously relative to my position on the Earth's surface. Nine hundred and forty North American bird species and their songs are included with iBird Pro Guide to Birds. I have nearly unlimited access to music; I can audio record my entire day; I can record high definition video and send it wirelessly. There are over 40,000 messages in my Gmail inbox. The world's major newspapers are continually updated by the minute. Thanks to my mobile web browser, I have access to more words than were contained in the National Library of Ireland on June 16, 1904. Even in 1904, news traveled quickly. Since the introduction of the telegraph, words have moved with near instantaneity across long distances. In *The Victorian Internet*, Tom Standage quotes the *Daily Telegraph*'s claim in 1843 that "Time itself is telegraphed out of existence." F. T. Marinetti maintains similarly in his epochal 1909 "Futurist Manifesto": "Time and space died yesterday." A century later, the statistics are nonetheless astonishing. The problem of information overload is often described as a spreading and dangerous epidemic, although much disagreement exists as to its causes and its cures.

A] We carry gargantuan amounts of perplexing information with us today, and it presents more problems than it solves.

B] The pace at which news travels today by the minute is astonishingly faster than what it was a century earlier.

C] The huge problem of information overload becomes strikingly clear when compared with the situation a century earlier, although its causes and remedies are not agreed upon yet.

D] While the pace at which news travels today is just marginally astonishingly faster than what it was a century earlier, the amount of news is astonishingly higher.

8. I was on a tech podcast discussing Google's decision to remove links to revenge porn from its search results when victims request it. If you can't make it disappear legally, you can at least make it more difficult to find. I supported Google's decision to make life harder for the world's creeps, but my host considered it a slippery slope. "If you're going to say, 'I'm going to make a search engine,'" he said, "you should make one that indexes what's on the Net, regardless of content." He was concerned that "editorial intervention always introduces bias," choosing instead to put his faith in an algorithm that "can be completely objective." My adversary was espousing what is called information universalism. It means that we should not stomach any limitations on speech, because of what freedom means and guarantees. Not only is this a misreading of the term freedom, but as our lives increasingly interact with the Internet, this attitude, while noble in theory, is more dangerous than ever.

A] Informative universalism, while good in theory, is a dangerous attitude to foster.

B] Informative universalism, while good in theory, is a dangerous attitude to foster as it misinterprets the basic definition of freedom.

C] Informative universalism, while noble in intent, is dangerous when applied unambiguously to the Internet interactions.

D] As we increasingly interact with the Internet, freedom without restrictions, as espoused by the concept of information universalism, is more dangerous than it has been in the past.

9. Linguistic chauvinism, now modernized and globalized, is a powerful force contributing to the mass disappearance of languages and cultures, an extinction event with fundamental and incalculable political ramifications. Up to half of all living human languages – mostly those that are undocumented, unwritten, and unknown outside their communities – can be expected to disappear over the next century. Leftists and liberals have recognized the role of global capital and its boundless growth imperative, as well as our own complicity as consumers, in the sixth (and current) mass extinction of biological life forms. So why is there more ambivalence about – or simply less awareness of – a linguistic and cultural emergency equally bound up in centuries of capitalism, imperialism, and nation-building?

A] The alarming process and consequences of the current and impending mass disappearance of languages and cultures, with fundamental and incalculable political ramifications, is surprisingly not as much in focus as it deserves to be.

B] Up to half of all living human languages – mostly those that are undocumented, unwritten, and unknown outside their communities – can be expected to disappear over the next century.

C] Linguistic chauvinism, now modernized and globalized, is a powerful force contributing to the mass disappearance of languages and cultures, an extinction event with fundamental and incalculable political ramifications.

D] Linguistic chauvinism is as big a concern as the role of global capital and its boundless growth mandate, and our own complicity as consumers therein, in the sixth (and current) mass extinction of biological life forms.

10. It has been over a century now since Nietzsche explored nihilism and its implications for civilization. As he predicted, nihilism's impact on the culture and values of the 20th century has been pervasive, its apocalyptic tenor spawning a mood of gloom and a good deal of anxiety, anger, and terror. Interestingly, Nietzsche himself, a radical skeptic preoccupied with language, knowledge, and truth, anticipated many of the themes of postmodernity. It's helpful to note, then, that he believed we could – at a terrible price – eventually work through nihilism. If we survived the process of destroying all interpretations of the world, we could then perhaps discover the correct course for humankind.

A] Nietzsche was correct in his predictions about the vastly gloomy and negative implications of nihilism for civilizations.

B] While Nietzsche was a skeptic who was largely correct in his gloomy predictions about the impact of nihilism on mankind, he too agreed that we could work our way through it all.

C] If we survived the process of destroying all interpretations of the world, we could then perhaps discover the correct course for humankind.

D] While Nietzsche was a skeptic who was largely correct in his gloomy predictions about the impact of nihilism on mankind, he ironically believed that we could work our way through it all.

11. It was just over a century ago when a group of linguists made an effort to go beyond the language politics of imperialism and nationalism. For reasons both scientific and political, they affirmed the equality of all languages. They devoted themselves to documenting languages that were all but invisible to their contemporaries, or else considered beneath notice by all but Christian missionaries. They stressed the natural primacy of oral language (and later sign language among the deaf) over the constructed, elitist character of every written tradition. They shunned the prescriptivism of language teaching – always either a pragmatic exercise in learning rules, or an ideological exercise in promoting standards – and committed linguists to describing the actual, constant variation of real human speech. Their program could be called "radical linguistics."

A] The effort of a group of linguists to treat all languages, including little known ones, as equal, and stressing upon the preeminence of oral language over written and of the actual, real speech over the regulations of language teaching, could be called "radical linguistics".

B] "Radical linguistics" is a program conceived over a century ago, wherein a group of linguists made an effort to go beyond the language politics of imperialism and nationalism.

C] The effort to bring in focus the equality of all languages and to reiterate the primacy of the spoken word over the written word that followed rules is called "radical linguistics".

D] "Radical linguists" have been making efforts for over a century in bringing a change in the perceptions of inferiority of the oral traditions of language vis-à-vis the written word.

12. The use of psychedelics for enhancing creative problem-solving was first demonstrated in a 1966 study that administered mescaline to a group of professionals, including engineers, physicists, architects, and designers. At the end of the session, many of these professionals had come up with fruitful leads or completed solutions that fit the necessary criteria and were accepted for production, publication, or construction. The study reported that the psychedelic caused a variety of changes that enhanced the creative process, including a heightened capacity for visualization, increased flexibility of thought, and a greater ability to concentrate on the problem. Perhaps the most important aspect of psychedelics, at least with regards to their usefulness to society at large, however, is their medicinal properties. Presently, research is demonstrating that skillful use of psychedelics involving proper preparation, guidance, and the right setting has the potential to bring about healing and transformative experiences with lasting positive effects, helping to treat depression, addiction, and anxiety-related disorders.

A] The use of psychedelics has proven to enhance creative problem-solving as many professionals were able to generate practical and practicable solutions to several problems when they were administered mescaline.

B] The most important aspect of psychedelics, at least with regards to their usefulness to society at large, is their medicinal properties.

C] While the use of psychedelics has been reported to improve the creative problem solving process, their biggest utility perhaps lies in their judicious and skillful use in the medicinal field.

D] Studies have shown that psychedelic caused a variety of changes that enhanced the creative process, including a heightened capacity for visualization, increased flexibility of thought, and a greater ability to concentrate on the problem.

13. Electronic educational gaming has received a tremendous amount of attention within the last few years. This excitement is owing, in part, to theoretical arguments and empirical findings about the possibilities of using videogames in teaching and learning. Several articles have also drawn attention to video game use, highlighting concern, health and fitness issues, multi-user virtual environments & simulations, and the promise of digital game-based learning. One area within the video game arena that has received considerably less attention is the concept of student development of games. The work that has been done has shown tremendous promise for motivating students, building conceptual knowledge, and improving content knowledge acquisition. Some proponents have argued that educators "ought to pay closer attention to videogames because they offer designed experiences, in which participants learn through a grammar of doing and being". That is right, but in addition, educators also ought to pay closer attention to student development of videogames because it offers design experiences that can impact classroom learning.

A] While the possible benefits of using videogames in teaching and learning have been and should continue to be explored, there is a need to evaluate the development of videogames by students as an area that promises much improvement in classroom learning.

B] Electronic educational gaming has received a tremendous amount of attention within the last few years but certain specific areas within that now need to be focused upon.

C] Even as it shows tremendous promise for motivating students, building conceptual knowledge, and improving content knowledge acquisition, the one area within the video game arena that has received considerably less attention is the concept of student development of games.

D] Whereas the likely benefits of using videogames in teaching and learning have been extensively explored, the one area that needs evaluation is the development of videogames by students as that promises much improvement in classroom learning.

14. Being good at sports requires talent but only when talent and ego are in perfect symmetry can a player make the leap from good to great. Forde uses a formula – (ego + coachability) x learning culture – with high-performing teams and individuals to help them maximise their talent. The equation shows that ego is the foundation of greatness but only if it is still open to being coached and criticised and there's a structure in place to help the player grow. It is an equation that explains the success and longevity of some top sports stars. The ego is in place to give them the confidence to perform on the biggest stage.

A] Whereas ego in players gives them the confidence to perform on the biggest stage, they need a structure in place to help them grow.

B] Whereas talent is a necessity, it requires the foundation of ego along with openness to criticism in a helping environment for a sports star to become great and remain so for long periods.

C] Ego is the foundation of greatness in players but only if it is still open to being coached and criticised and there's a structure in place to help the player grow.

D] Forde uses a formula – (ego + coachability) x learning culture – with high-performing teams and individuals to help them maximise their talent.

15. Lightning may have provided the spark needed for life to begin. Electric sparks can generate amino acids and sugars from an atmosphere loaded with water, methane, ammonia and hydrogen, as was shown in the famous Miller-Urey experiment reported in 1953, suggesting that lightning might have helped create the key building blocks of life on Earth in its early days. Over millions of years, larger and more complex molecules could form. Although research since then has revealed the early atmosphere of Earth was actually hydrogen-poor, scientists have suggested that volcanic clouds in the early atmosphere might have held methane, ammonia and hydrogen and been filled with lightning as well.

A] Lightning may have provided the spark needed for life to begin.

B] Electric sparks can generate amino acids and sugars from an atmosphere loaded with water, methane, ammonia and hydrogen, suggesting that lightning might have helped create the key building blocks of Earth in its early days.

C] The famous Miller-Urey experiment reported in 1953 was crucial in buttressing the theory that lightning helped create key building blocks of life on Earth in its early days

D] Scientists have suggested that volcanic clouds in the early atmosphere might have held methane, ammonia and hydrogen and been filled with lightning as well.

16. Although power and authority stem from the same concept, they are both very different as they contain deeper meanings. When we talk about leadership and influence, it becomes necessary to differentiate power and authority in order to comprehend their true meanings and application. The main difference between power and authority is the degree of control and influence they offer to the possessor. While authority is the sanctioned right given to a person to get things done in an official capacity, power is the ownership of authority and control to influence the opinions, movements and behaviors of others. Power has a wider scope and enables one to do what they want instead of looking out to see if they are doing it the right way. It might not always be given, but it comes to people who are experts in their field or have a significant amount of money and do not look up to anyone. Authority, on the other hand, is the right given to a person to give orders to subordinates and get things done by them. An official cannot perform his duties without adequate authority.

A] Power and authority differ mainly in that whereas authority is official power, power is unofficial authority.

B] Although power & authority stem from the same concept of leadership and influence, they mainly differ in their cause of origin, degree of control & scope of influence they offer to the possessor.

C] While authority is the certified right to get things done in an official position, power is possessing the control to influence the opinions and behaviors of others – in reference to their relationship to leadership and influence, this difference is necessary to understand their usefulness.

D] Power has a wider scope and enables one to do what they want instead of looking out to see if they are doing it the right way; authority has a more limited scope of influence.

17. Local communities have often come in conflict with agents trying to exploit resources, at a faster pace, for an expanding commercial-industrial economy. More often than not, such agents of resource-intensification are given preferential treatment by the state, through the grant of generous long leases over mineral or fish stocks, for example, or the provision of raw material at an enormously subsidized price. With the injustice so compounded, local communities at the receiving end of this process have no recourse except direct action, resisting both the state and outside exploiters through a variety of protest techniques. These struggles might perhaps be seen as a manifestation of a new kind of class conflict.

A] A new kind of class conflict arises from preferential treatment given to agents of resource-intensification by the state which the local community sees as unfair.

B] The grant of long leases to agents of resource-intensification for an expanding commercial-industrial economy leads to direct protests from the local community, which sees it as unfair.

C] Preferential treatment given by the state to agents of resource-intensification for an expanding commercial-industrial economy exacerbates injustice to local communities and leads to direct protests from them, resulting in a new type of class conflict.

D] Local communities have no option but to protest against agents of resource-intensification and create a new type of class conflict when they are given raw material at subsidized prices for an expanding commercial-industrial economy.

18. Although almost all climate scientists agree that the Earth is gradually warming, they have long been of two minds about the process of rapid climate shifts within larger periods of change. Some have speculated that the process works like a giant oven or freezer, warming or cooling the whole planet at the same time. Others think that shifts occur on opposing schedules in the Northern and Southern Hemispheres, like exaggerated seasons. Recent research in Germany examining climate patterns in the Southern Hemisphere at the end of the last Ice Age strengthens the idea that warming and cooling occurs at alternate times in the two hemispheres. A more definitive answer to this debate will allow scientists to better predict when and how quickly the next climate shift will happen.

A] Scientists have been unsure whether rapid shifts in the Earth's climate happen all at once or on opposing schedules in different hemispheres; research will help find a definitive answer and better predict climate shifts in future.

B] Scientists have been unsure whether rapid shifts in the Earth's climate happen all at once or on opposing schedules in different hemispheres; finding a definitive answer will help them better predict climate shifts in future.

C] Research in Germany will help scientists find a definitive answer about warming and cooling of the Earth and predict climate shifts in the future in a better manner.

D] More research rather than debates on warming or cooling of the Earth and exaggerated seasons in its hemispheres will help scientists in Germany predict climate changes better in future.

19. Modern bourgeois society, said Nietzsche, was decadent and enfeebled – a victim of the excessive development of the rational faculties at the expense of will and instinct. Against the liberal-rationalist stress on the intellect, Nietzsche urged recognition of the dark mysterious world of instinctual desires – the true forces of life. Smother the will with excessive intellectualizing and you destroy the spontaneity that sparks cultural creativity and ignites a zest for living. The critical and theoretical outlook destroyed the creative instincts. For man's manifold potential to be realized, he must forego relying on the intellect and nurture again the instinctual roots of human existence.

A] Nietzsche urges the decadent and enfeebled modern society to forego intellect and give importance to creative instincts.

B] Nietzsche urges the decadent and enfeebled modern society to smoother the will with excessive intellectualizing and ignite a zest for living.

mbaguru
LEADER IN ADAPTIVE PREPARATION FOR CAT

C] Nietzsche criticizes the intellectuals for enfeebling the modern bourgeois society by not nurturing man's creative instincts.

D] Nietzsche blames excessive intellectualization for the decline of modern society and suggests nurturing creative instincts instead.

20. The CCF financed several high-profile exhibitions of Abstract Expressionism during the '50s, including The New American Painting, which toured Europe between 1958 and 1959. Supposedly, the Tate Gallery couldn't afford to bring the exhibition to London – so an American millionaire called Julius Fleischmann stepped in, stumping up the cash so that it could travel to Britain. Fleischmann was the president of a body called the Farfield Foundation, which was funded by the CIA, America's spymaster agency. It is therefore possible to argue that important British abstract painters, such as John Hoyland, who were profoundly influenced by the Tate's exhibition in '59, were shaped by America's spymasters.

A] The CCF financed several high-profile exhibitions of Abstract Expressionism during the '50s, including The New American Painting, which toured Europe between 1958 and 1959.

B] Since the Tate Gallery couldn't afford to bring the exhibition to London, an American millionaire called Julius Fleischmann stepped in, stumping up the cash so that it could travel to Britain.

C] Some important British abstract painters, such as John Hoyland, were profoundly influenced by the Tate's exhibition in '59, were indirectly funded by the CIA.

D] It is plausible that some important British abstract painters, who were profoundly influenced by the Tate's exhibition in '59, were shaped indirectly by the CIA.

(Para Summary)
HOME SHEET L1

Time: 40 minutes

Directions for questions 1 to 20: Four alternative summaries are given below each text. Choose the option that best captures the essence of the text.

1. There's a new 'hero' on two wheels, and for the first time in nearly two decades it's not a Hero. Splendor – India and Hero MotoCorp's bestselling motorcycle for the past 17 years finally seems to have been trumped by its cousin, Activa, from the stable of Honda, Hero's erstwhile partner. Beyond model-wise market shares, the change marks, cautiously, the return of the scooter. From a high in the early 90s, when Bajaj Chetak reigned supreme, the demand for scooters shrank to just 12 percent of the two-wheeler market by 2006-07. That year, seven bikes rolled out of showrooms for every scooter sold. The 'unthinkable' happened in early-2010 when Bajaj stopped making scooters altogether.
   A] The 'unthinkable' has happened as a scooter, Activa from Honda, has sold more than Spelndor, which had been India's and Hero Motocorp's bestselling two-wheeler for the past 17 years.
   B] With Activa beating Splendor, Scooters have made a comeback for the first time since early 90's when Bajaj Chetak used to reign supreme, after which the demand for scooters gradually shrank to only 12% of the two-wheeler market.
   C] While Bajaj Chetak was a bestseller when scooters dominated the 2-wheeler market in the early 90's, the scooter market share saw erosion till 2006-07 when it hit a low; the scooter sees a possible return to a significant market share with Activa, from Honda, becoming a bestseller, beating the longstanding leader Splendor, from Hero Motocorp.
   D] Hero has been displaced as the hero of the 2-wheeler market – by its erstwhile partner Honda, whose Activa now rules roost, having displaced Splendor, which had been the market leader for 17 years straight.

2. Expenditure on education as share of GDP has fluctuated between 3.55 per cent and 4 per cent, falling short of the 6 per cent of GDP promised by successive governments. Nonetheless, over the last decade, education has accounted for nearly 50 per cent of total social services spending. Despite the increased funding, poor learning outcomes mark the education system, irrespective of the school's ownership. Assessments by private/non-governmental organisations (NGOs) and government agencies find at least a third of students failing to meet the required minimum learning levels in mathematics and reading comprehension. Improving learning outcomes will require looking beyond funding to the central component of an effective education system: the teacher.
   A] Even though it has been less than promised, the expenditure on education has been the highest among social services; however, even the increased funding has not resulted in a desirable outcome because the focus of funding on the teacher, the central component of an effective education system, has been missing.
   B] While funding to education has increased, and is nearly 50% of the total spend on social services, the outcomes are still not as desired as established by various assessments, and there is need to go beyond funding and focus on the teacher, who is central to effectiveness of education.
   C] Since the funding to education by various governments has been short of the promised 6%, poor learning outcomes continue to mark the education system, in government as well as private schools.
   D] Instead of increasing spend on various peripheral factors which have failed to improve the effectiveness of the education system, funding needs to be directed towards the central component, the teacher.

3. "Nihilism" comes from the Latin *nihil*, or nothing, which means not anything, that which does not exist. It appears in the verb "annihilate," meaning to bring to nothing, to destroy completely. Early in the nineteenth century, Friedrich Jacobi used the word to negatively characterize transcendental idealism. In Russia, nihilism became identified with a loosely organized revolutionary movement that rejected the authority of the state, church, and family.

A] Transcendental idealism and nihilism are essentially the same thing as demonstrated by Friedrich Jacobi.

B] "Nihilism" comes from the Latin *nihil*, or nothing. It appears aptlyin the verb annihilate, and has also been used in reference to some similarly oriented movements and theories.

C] The ill-organized revolution in Russia that rejected the authority of the state, church and family derives its origin from the Latin word Nihilism.

D] Nihilism means destruction and has been used as such in words such as annihilate, to characterize negative beliefs and values such as transcendental idealism.

4. The terms "a priori" and "a posteriori" are used primarily to denote the foundations upon which a proposition is known. A given proposition is known as *a priori* if it can be known independent of any experience other than the experience of learning the language in which the proposition is expressed, whereas a proposition that is known as *a posteriori* is known on the basis of experience. For example, the proposition that all bachelors are unmarried is *a priori*, and the proposition that it is raining outside now is *a posteriori*.

A] While "a priori" is a proposition that is known or true independent of experience apart from the knowledge of the language of expression, an experience must establish the "a posteriori" proposition.

B] The terms "a priori" and "a posteriori" are used primarily to denote two types of propositions.

C] "A priori" based proposition is known or true independent of experience apart from the knowledge of the language being used, whereas "a posteriori" based proposition is known or validated on the basis of experience.

D] Where "a priori" proposition is prior to experience, "a posteriori" can only be post experience.

5. History is a long tale of things that went FUBAR – debacles, disasters and catastrophes. (Whereas BAR stands for beyond all recognition, you can guess what the first two letters denote.) That is what makes history fun to study. And maybe even useful. Each disaster carries with it a warning. For example, if the Sioux have assembled a vast war party out on the plains, don't put on your best uniform and ride out to the Little Bighorn to have a look. If the architect of a great ship tells you that "not even God himself could sink this ship," take the next boat! When you are up against a superior enemy – like Fabius Maximus against Hannibal – don't engage in battle. Instead, delay… procrastinate… dodge him… wear him down… until you are in a better position. And if the stock market is selling at 20 times earnings… and all your friends, analysts and experts urge you to "get in" because you "can't lose" – it's time to get out!

A] What makes history fun and useful to study is the numerous tales it carries of things that went horribly wrong, and the warnings they imply for us.

B] Do not believe what people say or suggest very confidently as history is replete with examples of things that went completely wrong, opposed to the positive expectations thereof.

C] Debacles, disasters and catastrophes are the biggest source of lessons for the future.

D] You should not take on odds that you can't beat, as exemplified by several things that went wrong in the past.

6. The decline in Chinese demand for natural resources during the past year has been one of the main things prompting observers to wonder if the country is undergoing a much-sharper economic slowdown than the official numbers indicate. It may well be. But this also could be evidence of the Chinese economy's shift away from resource-intensive manufacturing and infrastructure-building and toward providing services for Chinese consumers. In general, developing countries are making the switch from goods to services much earlier in their development than the U.S. and Europe did. This may not be all good news; it might make it harder for them to catch up with wealthy countries. But it does mean less demand for things, and for the resources to make those things.

A] The movement of developing nations such as China towards services from goods comparatively earlier in their development, even with some attached negatives, implies less consumption of natural resources needed for resource- intensive manufacturing and infra-structure building.

B] The decline in Chinese demand for natural resources during the past year has been one of the main things prompting observers to wonder if the country is undergoing a much-sharper economic slowdown than the official numbers indicate.

C] The decline in the economic progress of China is not a cause for worry as it has more positive implications for China and developing nations than the negative ones.

D] U.S. and Europe moved from goods to services much later than China is doing, and that comes with both pros and cons.

7. Consider the things that people do want to spend their money on. The defining consumer product of our age is the smartphone. A smartphone is a good, and it takes resources to make and transport it. Still, it takes a lot less resources than, say, a car. Most of its value is in the software that is loaded onto it and the people, information and entertainment you can connect to with it. That's a different sort of value creation than 20th-century resource-based value creation. If that's the direction the global economy is headed in, the connections between growth, trade and resource consumption aren't going to be the same as they have been. That is probably a good thing.

A] Each century brings along a paradigm shift, in terms of the nature of products that are created and consumed and the connections between growth, trade and vale creation.

B] The popularity of smartphones now outstrips the popularity of cars, and it is probably a good thing that the value of the same is in the software and people, information you can connect to it.

C] The value creation in 21st century is vastly different from the 20th-century resource-based value creation – a smartphone is the perfect embodiment of the same.

D] If the comparison of popular things of expense such as smartphones and cars were to be indicative of value creation, a shift from the latter to the former is a probably a good thing as it entails less consumption of resources.

8. It's no longer about the flow of trade, but the flow of expertise. Nobody makes stuff anymore, they organise the production of making things. Cars aren't made anywhere, they're made everywhere, with parts sourced from Mexico, Canada, China and Japan. That's the world we already live in. What distinguishes your Fords or Mercedes from other companies is their ability to make this global process work. The bulk of the manufacturing may be done in factories around the world, but the core business stays in the US and Germany, where they have the technical, managerial and marketing know-how needed for car production. But it's not going to stay that way. With the move from trade in goods to trade in know-how or expertise, all jobs – not just hands-on manufacturing ones – will change.

A] Trade in goods has caused a global process to work successfully in creation of goods; a similar shift will follow in trade in expertise and know-how.

B] Manufacturing is now only the organized production of things across countries and continents; only the technical, managerial and marketing know-how remains located in the US and Germany.

C] The world we live in is practically borderless – globalization means that even something as basic as car is produced with its parts being manufactured across various countries.

D] Flow of goods being traded is no longer important, it is all about flow of technical and marketing.

9. Open space offices, while still fashionable, are being increasingly questioned for their impact on employee productivity. There's one big reason we'd all love a space with four walls and a door that shuts: focus. The truth is, we can't multitask and small distractions can cause us to lose focus for upwards of 20 minutes. What's more, certain open spaces can negatively impact our memory. This is especially true for hotdesking, an extreme version of open plan working where people sit wherever they want in the work place, moving their equipment around with them. It goes against the basic fact that we retain more information when we sit in one spot.

A] To be able to focus, closed door offices are better as compared to open space ones.
B] While open space offices are still popular, their impact on productivity of employees is being assessed as closed spaces allow for better focus and information retention.
C] Just because something is popular and fashionable doesn't make it right – we need an objective assessment to gauge its effectiveness.
D] For tasks that require more than 20 minutes of focused work, closed space offices are better than open space ones.

10. While trading rest for unpaid overtime is clearly a bad deal for employees, it's actually pretty lousy for employers, too. A Stanford University study found that employee output declines sharply after 50 hours per week and nosedives after 56 hours to the point where someone who puts in 70 hours doesn't produce anything more with those additional 14 hours. Similar studies have linked long hours with absenteeism, long-term memory loss and impaired decision-making skills.

A] Working long hours is detrimental for both employees and employers, as employee productivity declines rapidly beyond a threshold.
B] Paid overtime would be beneficial for employees in a way; however, it would still be lousy for employers.
C] Working beyond 56 hours per week is neither good for the employees, nor for the employers.
D] Long hours of work cause absenteeism, long-term memory loss and impaired decision-making skills.

11. Particulate matter (PM), the tiny particles emitted in vehicle exhaust fumes, are the biggest air-borne killer. One of the finest of these particles, PM2.5 – so called because it's just 2.5 micrometers in diameter – can penetrate lung tissue and enter the blood stream, where they damage arteries and cause cardiovascular disease. Nitrogen dioxide (NO2) is the next deadliest component: by inflaming the lungs and rendering us susceptible to infection, it leads to 23,500 deaths annually in the UK alone. And so the fight is on to eradicate air pollution in our cities. While the best solution in the long-term would be to ban fossil-fuelled vehicles, that won't help the millions who are dying in the meantime, and so some high-tech immediate solutions are now on the cards.

A] While banning fossil fuel vehicles is a desirable long-term solution to eradicate potentially fatal air pollution caused by their exhaust fumes, some immediate high-tech solutions are now likely.
B] Particulate matter (PM), the tiny particles emitted in vehicle exhaust fumes, are the biggest air-borne killer.
C] Nitrogen dioxide (NO2) is the deadliest component in vehicle emissions: by inflaming the lungs and rendering us susceptible to infection, it leads to 23,500 deaths annually in the UK alone.
D] We cannot wait for long term solutions to eradicate fatal air pollution; the degree of the problem is so big that we must immediately ban fossil-fuelled vehicles.

12. Some people yearn to stand out; others try desperately to blend in. A rare few individuals manage to do both at the same time. Sam Barsky is one of those. Since last weekend, the previously little-known knitter from Maryland has found himself suddenly in the headlines for his ability to stitch himself, quite literally, into his surroundings. Photos of Barsky wearing jumpers he has designed that feature the very location in which he's standing – from Stonehenge to Niagara Falls, from the Golden Gate Bridge in San Francisco, California, to London's Tower Bridge – have gone viral this week. An intriguing parallel with Barsky's aesthetic intuitions, one must summon that most celebrated selfiest of all times – the 17th-Century Dutch master Rembrandt van Rijn. Creator of more than 80 images of his own countenance over the course of his life, Rembrandt chronicled not only the slow ripening of his face over five decades (from the 1620s to the 1660s), but also his preoccupation with seeing himself as part of the rich tapestry of cultural history.

A] Some people yearn to stand out; others try desperately to blend in. A rare few individuals manage to do both at the same time.

B] Creator of more than 80 images of his own countenance over the course of his life, Rembrandt chronicled not only the slow ripening of his face over five decades (from the 1620s to the 1660s), but also his preoccupation with seeing himself as part of the rich tapestry of cultural history.

C] Sam Barsky, who has recently found fame for being photographed in attires that blend him into the surroundings, has an intriguing parallel in the celebrated 17th Century master Rembrandt van Rijn.

D] Since last weekend, the previously little-known knitter from Maryland, Sam Barsky, has found himself suddenly in the headlines for his ability to stitch himself, quite literally, into his surroundings.

13. Jane Austen's earliest writings appear to have little in common with the restrained and realistic society portrayed in her adult novels. By contrast, they are exuberantly expressionistic tales of sexual misdemeanour, of female drunkenness and violence. A different side to the British novelist can be seen in the three notebooks of her early writings that still survive. Thought to have been written when Austen was between the ages of 11 and 17, they contain stories, dramatic sketches and a spoof history. Right through her juvenile writing, she's already quite assured in her style – she can imitate the kind of writings that she would have read as a child.

A] Jane Austen's early writings are thought to have been written when she was between the ages of 11 to 17, and she seems already quite assured in her style even then.

B] Jane Austen, as a child, is more likely to have preferred her early lively writings as compared to her later reserved and realistic portrayals of society.

C] Jane Austen's earliest writings are exuberantly expressionistic tales of sexual misdemeanour, of female drunkenness and violence.

D] Jane Austen's earliest writings are vigorous and expressive, bringing forth a different side to her in stark contrast to her restrained depiction of society in her adult novels.

14. In a sound-proofed hangar on an RAF airbase just north of Cambridge, UK, a team is busy using sledgehammers to teach their computers a lesson. The team has gathered thousands of window-panes and doors, all of different shapes and sizes, which they then smash, one by one, recording the distinctive shattering sound of each type of glass. Sometimes they swing sledgehammers or garden spades, sometimes they throw bricks. Welcome to the latest frontier of artificial intelligence. Mitchell is CEO and founder of Audio Analytic, a Cambridge-based start-up that is training a machine learning system to recognise the sound of breaking glass. And it's not just glass: the company is also teaching computers to pick out other sounds that are important to humans, like smoke alarms, bawling babies and barking dogs. The idea is to build this ability to recognise sounds – without confusing a dropped glass with a smashed window, say – into smart-home systems that will alert you when an intruder breaks in or your child starts to cry.

A] Mitchell is CEO and founder of Audio Analytic, a Cambridge-based start-up that is training a machine learning system to recognise the sound of breaking glass.

B] Not just glass, Audio Analytic company is also teaching computers to pick out other sounds that are important to humans, like smoke alarms, bawling babies and barking dogs.

C] In a sound-proofed hangar on an RAF airbase just north of Cambridge, UK, a team is busy using sledgehammers to teach their computers a lesson.

D] Audio Analytic is a start-up that is training a machine learning system with the intent to build the ability to recognize sounds into smart-home systems through artificial intelligence.

15. The plague wiped out a great deal of 17th-century Britain. Popular accounts of the epidemic described its horror in detail. And they described the mass graves, known as 'plague pits', which are said to have gouged land across the city. Hundreds of bodies were said to have been hastily buried in these pits without coffins, care or ceremony. Two hundred years later, London opened its first underground railway – the world's first – in 1863. By the century's close, a spider web of track linked stations as far as Shepherd's Bush and Bank, Hammersmith and Mansion House. If you look at these early routes, you'll notice something odd: They don't take the straightest, fastest line from point A to B. Instead, they meander. They curve. Almost like they're avoiding something. It didn't take long to put two and two together. When engineers went to design these underground railroads, the story goes, they tried to avoid plague pits – either because they didn't want to disturb the dead, or because the bodies were packed too thickly to bore through.

A] It seems that the early routes of London's first underground railway were laid in meandering manner almost as if to avoid the mass graves dug across the city two centuries earlier when the plague wiped out a huge chunk of the British population.

B] The early routes of London's first underground railway were odd as they didn't take the straightest, fastest line from point A to B

C] When engineers went to design the first underground railroads of London, they tried to avoid plague pits – either because they didn't want to disturb the dead.

D] Following the plague in London in the 17th century, hundreds of bodies were said to have been hastily buried in these pits without coffins, care or ceremony only to be discovered two hundred years later, when London opened its first underground railway in 1863.

16. Canadian poet and singer-songwriter Leonard Cohen had long proved his power to make grown men and women cry, before his widely mourned death this week, aged 82. Cohen's reputation as 'the high priest of pathos' stemmed from his rich catalogue, spanning 1960s poetry and 21st-Century songs: his recently released 14th album, You Want It Darker, won praise for its moody strength. The spiritual tone of Cohen's work was sealed by his unmistakably deep and battle-grizzled vocals – but it was also rooted in genuine faith: his Jewish heritage and Buddhist practice.

A] Canadian poet and singer-songwriter Leonard Cohen had long proved his power to make grown men and women cry, before his widely mourned death this week, aged 82.

B] Canadian poet and singer-songwriter Leonard Cohen's reputation as 'the high priest of pathos' stemmed from his rich catalogue, spanning 1960s poetry and 21st-Century songs.

C] Canadian poet and singer-songwriter Leonard Cohen's recently released 14th album, You Want It Darker, won praise for its moody strength.

D] The spiritual tone of Canadian poet and singer-songwriter Leonard Cohen's work was sealed by his unmistakably deep and battle-grizzled vocals – but it was also rooted in genuine faith: his Jewish heritage and Buddhist practice.

17. When you visit Antarctica, one of the most striking things about the place is its very lack of sound. There are no revving cars, or people barking into mobile phones. There aren't even trees for the wind to rustle. You only hear sounds in snatches – when you stumble into the middle of a penguin colony, or the ice cracks and sends part of a glacier plunging into the ocean. That silence may seem obvious: Antarctica is the world's last wilderness, a continent of over 5.4 million sq miles (14 million sq km), almost all of it under ice. But nothing can prepare you for the strangeness of it.

A] Antarctica is the world's last wilderness, a continent of over 5.4 million sq miles (14 million sq km), almost all of it under ice.

B] Antarctica is beautiful and untouched by human sounds of varying kinds such as the revving of cars or people speaking into their mobile phones.

C] The lack of sound in Antarctica, though obvious given its uninhibited wilderness, is still extremely strange.

D] In Antarctica, one only hears sounds in snatches.

18. Compounds and mixtures – they may have the same concept, but they operate in their own different ways. Starting with compounds, these are formed when two or more elements are combined to form a new substance that shows no signs of their previous properties. The product has different chemical properties and will always contain the same ratio of its component elements. Take two molecules of hydrogen and a single molecule of oxygen for example. When combined, they no longer have their own chemical properties, and will always require the ratio of 2:1 (hydrogen: oxygen). A mixture, on the other hand, involves only the physical combination of these substances. Unlike compounds, they can be combined in any ratio. Also, each of these substances has their own chemical properties. One other difference would be the means of separating these combined substances. Compounds can be broken down into their elements, but only by chemical means. Mixtures however, can be separated through physical means.

A] While compounds are essentially chemicals by virtue of their composition, the same cannot be said to be true for mixtures.

B] While compounds are formed by chemical association of elements, have chemical properties different from the component elements, and can be separated chemically, mixtures involve physical combination of substances which do not lose their individual chemical properties and can be separated through physical means.

C] Compounds are formed when two or more elements are combined to form a new substance that shows no signs of their previous properties.

D] Mixture involves only the physical combination of the components.

19. The Liar Paradox is an argument that arrives at a contradiction by reasoning about a Liar Sentence. The Classical Liar Sentence is the self-referential sentence, "This sentence is false," which leads to the same difficulties as the sentence, "I am lying." Most people, when first encountering the Liar Paradox, react in one of two ways. One reaction is to not take the Paradox seriously and say they won't reason any more about it. The second and more popular reaction is to say the Liar Sentence must be meaningless. Both of these reactions are a way out of the Paradox. That is, they stop the argument of the Paradox without even making an effort to resolve it.

A] Most people do not take the Liar Paradox seriously and say they won't reason about it.

B] The most popular reaction to Liar Paradox is to say that the Liar Sentence is meaningless.

C] The reasoning contradiction inherent in the Liar Paradox causes people to give up even before making an effort to resolve it.

D] The Classical Liar Sentence is the self-referential sentence, "This sentence is false," which leads to the same difficulties as the sentence, "I am lying."

20. Art historians ascribe special importance to Picasso's time in Gosol, because there, in self-imposed exile from the backbiting Parisian art world, he changed his art dramatically and profoundly. When he arrived in Gosol, Picasso's art was moving in a new, startling, and more original direction. It was beginning to feel tougher and simpler, stranger yet more timeless. Picasso sensed this change, and revelled in the rapture of inspiration. During his stay in Gosol, which lasted around 10 weeks, he was remarkably prolific: he produced seven large paintings, a dozen medium-sized ones, and countless drawings, watercolours, gouaches, and carvings.

A] Art historians ascribe special importance to Picasso's time in Gosol, because there, in self-imposed exile from the backbiting Parisian art world, he changed his art dramatically and profoundly.

B] When he arrived in Gosol, Picasso's art was moving in a new, startling, and more original direction.

C] When he arrived in Gosol, Picasso's art was beginning to feel tougher and simpler, stranger yet more timeless. Picasso sensed this change, and revelled in the rapture of inspiration.

D] During his stay in Gosol, which lasted around 10 weeks, Picasso was remarkably prolific: he produced seven large paintings, a dozen medium-sized ones, and countless drawings, watercolours, gouaches, and carvings.

Please DO NOT ATTEMPT HOME SHEET-L2 unless you have got ≥35 marks within the stipulated time.
Incase you have got less than 35 marks, please go to the topic in the concept-book, do the solved examples again, practice the exercise and review the class-sheets before attempting HOME SHEET-L2.
This is important for you to find out your level in this topic and will help you immensely later in cracking the CAT!

mbaguru
LEADER IN ADAPTIVE PREPARATION FOR CAT

English-RC
(Para Summary)
HOME SHEET L2

Time: 45 minutes

This sheet will help you determine your final level in this topic.
Please ensure you are fresh and will have no distractions during the period of this exercise.
Please ensure you attempt this exercise in one go & within the time-limit.
At the end of the time-limit, please evaluate using the solutions provided & put your score and mark your level accordingly on the cover page of this booklet & on the ADAPTIVE CARD given to you. This will ensure you have taken another step towards cracking the CAT!

Directions for questions 1 to 20: Four alternative summaries are given below each of the short paragraphs that follow. Choose the option that best captures the essence of the text.

1. Music is a surprising constant in Antarctica's history. It's been crucial to every exploration that came here, providing the most vivid link home, and it's just as crucial today for the few thousand scientists who work here in the continent's summer (in winter, the population drops to around 1,000). You only have to read the accounts of the original polar expeditions to realise that. Captain Robert Falcon Scott, for instance, took two gramophones to the continent for his final, tragic expedition, when he reached the South Pole, but never made it back to camp. It was usual to start the gramophone after dinner. It is necessary to be cut off from civilization and all that it means to enable you to realise fully the power music has to recall the past, or the depth of meaning in it to soothe the present and give hope to the future.

   A] Music has been crucial to every exploration to Antarctica as it provides a vivid link back home.
   B] Music is a surprising constant in Antarctica's history, and the power of music in the context of the past, the present and the future becomes most vivid when one is totally cut off from civilization.
   C] The accounts of the original polar expeditions make clear the crucial role that music has played in every exploration to Antarctica since Captain Robert Falcon Scott.
   D] It is necessary to be cut off from civilization and all that it means to enable you to realise fully the power music has to recall the past, or the depth of meaning in it to soothe the present and give hope to the future.

2. *I didn't kill myself*
   when things went wrong
   I didn't turn
   to drugs or teaching
   I tried to sleep
   but when I couldn't sleep
   I learned to write
   I learned to write
   what might be read
   on nights like this
   by one like me

   A] I have displayed remarkable resilience through tough times without resorting to the usual escape routes such as drugs.
   B] Rather than resorting to escape tough times through any negative means, I chose to learn to write what may inspire others when they read it while faced similarly tough times.
   C] I began writing to stay motivated through times when things went wrong
   D] It is difficult to sleep peacefully during tough times; I chose the more productive alternative by writing for others.

3. Culture is the term used to describe people's way of life. It is a set of beliefs and behaviors learned by a group of people. When people have a common set of beliefs, ideals, and attitudes, they belong to the same cultural people group. Culture can also be seen in the way people write, dress, cook, and act. It's what makes countries unique. Culture, therefore, is the religion, values, norms and traditions that a group of people share. In an anthropologist's view, people are defined by their culture. Different countries practice different cultures. Society, on the other hand, pertains to the civilization or the group a person interacts with. It is a community or a large group of people who share common traditions, customs, values and other characteristics. In other words, society is a group of people who live in a territory – a city, a region, or a country – and who share a culture.

A] Culture is a collective body of knowledge, such as in values and norms, while society is the resultant behavior of the individuals who practice that body of knowledge.

B] Culture is what a society looks like from the outside. Society is what a culture looks like from the inside.

C] Society is created by cultural interactions of its people, and culture is created by social interactions of its people.

D] Societies interact through culture, and culture interacts through societies.

4. Some opponents (anti-abortionists, pro-life activists) holding the extreme view, argue that human personhood begins from the unicellular zygote and thus – according to the religious stance – one should not have an abortion by virtue of the *imago dei* of the human being. To have an abortion would be, by definition, homicide. The extreme liberal view is held by proponents (abortionists). They claim that human personhood begins immediately after birth or a bit later. Thus, they consider the relevant date is at birth or a short time later (say, one month). The proponents of the moderate views argue that there is a morally relevant break in the biological process of development – from the unicellular zygote to birth – which determines the justifiability and non-justifiability of having an abortion. According to them, there is a gradual process from being a fetus to being an infant where the fetus is not a human being but a human offspring with a different moral status.

A] The answer to the question of abortion depends on when one sees the origin of life – at conception or after the birth.

B] The most agreeable view on abortion is the moderate view which believes that there is a morally relevant break in the biological process of development – from the unicellular zygote to birth – that determines the justifiability of having an abortion.

C] There are three main views regarding abortion: first, the extreme conservative view which equates abortion with homicide; second, the extreme liberal view that proposes that human personhood begins after birth; and third, moderate views which lie between both extremes.

D] The question of abortion has no definite answer as clear from the extreme view of the proponents (abortionists) and the opponents (anti-abortionists) on the issue.

5. According to natural law theory of law, there is no clean division between the notion of law and the notion of morality. Though there are different versions of natural law theory, all subscribe to the thesis that there are at least some laws that depend for their "authority" not on some pre-existing human convention, but on the logical relationship in which they stand to moral standards. Otherwise put, some norms are authoritative in virtue of their moral content, even when there is no convention that makes moral merit a criterion of legal validity. The idea that the concepts of law and morality intersect in some way is called the Overlap Thesis.

A] Some morals are authoritative in virtue of their relationship with law, even when there is no convention that makes moral merit a criterion of legal validity.

B] There is one kind of natural law theory having to do with the relationship of morality to law.

C] The concepts of law and morality rarely intersect except for some laws.

D] All versions of natural law theory basically subscribe to the thesis that atleast some laws derive their authority from their relationship with moral standards.

6. A paradox is generally a puzzling conclusion we seem to be driven towards by our reasoning, but which is highly counterintuitive, nevertheless. There are, among these, a large variety of paradoxes of a logical nature which have teased even professional logicians, in some cases for several millennia. But what are now sometimes isolated as "the logical paradoxes" are a much less heterogeneous collection: they are a group of antinomies centered on the notion of *self-reference*, some of which were known in Classical times, but most of which became particularly prominent in the early decades of last century.

A] A paradox is a puzzling, though counterintuitive, conclusion and "logical paradoxes", centered on the notion of self-reference have been teasing logicians for millennia, even though they have become very conspicuous in the early decades of the last century.

B] The logical paradoxes are a heterogeneous collection of paradoxes which have troubled logicians for millennia, and even more so in the last decade.

C] The logical paradoxes are a not-so-heterogeneous collection of paradoxes which have troubled logicians for millennia, and even more so in the last decade.

D] A logical paradox is generally a puzzling conclusion we seem to be driven towards by our reasoning, but which is highly counterintuitive, nevertheless.

7. A *deductive argument* is an argument that is intended by the arguer to be (deductively) *valid*, that is, to provide a *guarantee* of the truth of the conclusion provided that the argument's premises (assumptions) are true. This point can be expressed also by saying that, in a deductive argument, the premises are intended to provide such strong support for the conclusion that, if the premises are true, then it would be *impossible* for the conclusion to be false. An argument in which the premises do succeed in guaranteeing the conclusion is called a (deductively) valid argument. If a valid argument has true premises, then the argument is said to be *sound*. An *inductive argument* is an argument that is intended by the arguer merely to establish or increase the probability of its conclusion. In an inductive argument, the premises are intended only to be so strong that, if they were true, then it would be *unlikely* that the conclusion is false. But its success or strength is a matter of degree, unlike with deductive arguments. A deductive argument is valid or else invalid.

A] Deductive argument is either valid or invalid, whereas the same cannot be said of an inductive argument.

B] A deductive argument provides a guarantee of truth of its conclusion for given true assumptions; an inductive argument merely increases the probability of its conclusion being true.

C] Deductive argument is comparative whereas an inductive argument is absolute.

D] In a deductive argument, the premises are intended to provide such strong support for the conclusion that, if the premises are true, then it would be *impossible* for the conclusion to be false.

8. It is important for shipping companies to be clear about the objectives for maintenance and materials management - as to whether the primary focus is on service level improvement or cost minimization. Often when certain systems are set in place, the cost minimization objective and associated procedure become more important than the flexibility required for service level improvement. The problem really arises since cost minimization tends to focus on out of pocket costs, which are visible, while the opportunity costs, often greater in value, are lost sight of.

A] Shipping companies have to either minimize costs or maximize service quality. If they focus on cost minimization, they will reduce quality. They should focus on service level improvement, or else opportunity costs will be lost sight of.

B] Shipping companies should determine the primary focus of their maintenance and materials management. Focus on cost minimization may reduce visible costs, but ignore greater invisible costs and impair service quality.

C] Any cost minimization programme in shipping is bound to lower the quality of service. Therefore, shipping companies must be clear about the primary focus of their maintenance and materials management before embarking on cost minimization.

D] Shipping companies should focus on quality level improvement rather than cost cutting. Cost cutting will lead to untold opportunity costs. Companies should have systems in place to make the service level flexible.

9. Try before you buy. We use this memorable saying to urge you to experience the consequences of an alternative before you choose it, whenever this is feasible. If you are considering buying a van after having always owned sedans, rent one for a week or borrow a friend's. By experiencing the consequences first hand, they become more meaningful. In addition, you are likely to identify consequences you had not even thought of before. May be you will discover that it is difficult to park the van in your small parking space at work, but that, on the other hand, your elderly father has a much easier time getting in and out of it.

A] If you are planning to buy a van after being used to sedans, borrow a van or rent it and try it before deciding to buy it. Then you may realize that parking a van is difficult while it is easier for your elderly lather to get in and out of it.

B] Before choosing an alternative, experience its consequences if feasible. If, for example, you want to change from sedans to a van, try one before buying it. You will discover aspects you may never have thought of.

C] Always try before you buy anything. You are bound to discover many consequences. One of the consequences of going in for a van is that it is more difficult to park than sedans at the office car park.

D] We urge you to try products such as vans before buying them. Then you can experience consequences you have not thought of such as parking problems. But your father may find vans more comfortable than cars.

10. Physically inertia is a feeling that you just can't move; mentally, it is a sluggish mind. Even if you try to be sensitive, if your mind is sluggish, you just don't feel anything intensely. You may even see a tragedy enacted in front of your eyes and not be able to respond meaningfully. You may see one person exploiting another, one group persecuting another, and not be able to get angry. Your energy is frozen. You are not deliberately refusing to act; you just don't have the capacity.

A] Inertia makes your body and mind sluggish. They become insensitive to tragedies, exploitation, and persecution because it freezes your energy and decapacitates it.

B] When you have inertia you don't act although you see one person exploiting another or one group persecuting another. You don't get angry because you are incapable.

C] Inertia is of two types - physical and mental. Physical inertia restricts bodily movements. Mental inertia prevents mental response to events enacted in front of your eyes.

D] Physical inertia stops your body from moving; mental inertia freezes your energy, and stops your mind from responding meaningfully to events, even tragedies, in front of you.

11. Some decisions will be fairly obvious – 'no-brainers'. Your bank account is low, but you have a two-week vacation coming up and you want to get away to some place warm to relax with your family. Will you accept your in-laws' offer of free use of their Florida beachfront condo? Sure. You like your employer and feel ready to move forward in your career. Will you step in for your boss for three weeks while she attends a professional development course? Of course.

A] Some decisions are obvious under certain circumstances. You may, for example readily accept a relative's offer of free holiday accommodation. Or step in for your boss when she is away.

B] Some decisions are no-brainers. You need not think when making them. Examples are condo offers from in-law and job offers from bosses when your bank account is low or boss is away.

C] Easy decisions are called 'no-brainers' because they do not require any cerebral activity. Examples such as accepting free holiday accommodation abound in our lives.

D] Accepting an offer from in-laws when you are short on funds and want a holiday is a no-brainer. Another no-brainer is taking the boss's job when she is away.

12. Individuals respond with physical and emotional distress to situations that bring back memories of traumatic events. Such responses are normal and usually diminish over time, as those situations are repeated without unpleasant occurrences. But some people continue to respond with what can be overwhelming fear and may develop post-traumatic stress disorder (PTSD). For example, it would not be unusual for a soldier who experienced a traumatic battlefield situation to become distressed when hearing noises that bring back those memories, such as the sound of a helicopter. Most commonly, repeated exposure to such sounds without additional trauma reduces or extinguishes the fearful response – a phenomenon called "extinction memory." But some individuals continue to experience anxiety, along with other symptoms characteristic of PTSD, when hearing the sounds.

A] Individuals respond with physical and emotional distress to situations that recall traumatic memories. "Extinction memory" refers to the gradual diminishing of such responses that most people experience, as those situations are repeated without unpleasant occurrences; however, some individuals may continue to experience post-traumatic stress disorder.

B] Individuals respond with physical and emotional distress to situations that recall traumatic memories. Such responses almost never diminish gradually, even as those situations are repeated without unpleasant occurrences; this is called "extinction memory" So, people continue to respond fearfully and develop post-traumatic stress disorder.

C] Some people, especially those such as soldiers with memories of traumatic events, develop a condition called post-traumatic stress disorder; and they continue to experience nervousness whenever they are exposed to happenings similar to the ones they experienced earlier.

D] It is only people such as soldiers, who have had particularly traumatic experiences, who suffer from overwhelming fear and develop post-traumatic stress disorder (PTSD), when hearing the sounds.

13. The politically sensitive issue of more foreign investment in insurance has become a hurdle in the sale of more policies. If a customer wants to buy a life cover from a private insurer, the company may soon be unable to sell him a policy. That's because insurance firms are required to maintain a minimum capital to ensure that they remain financially healthy. Capital adequacy increases in proportion to the number of policies sold. Most Indian insurance companies are 74 : 26 joint ventures between Indian partners and foreign insurance companies. As sales of policies grow, both partners have to augment their capital in the ratio of 74 : 26. Some Indian partners have informed the government of their inability to further fund the growth of their business.

A] Indian partners of insurance companies which are joint ventures between Indian and foreign insurance companies have less money to be used as capital as compared to their foreign partners.

B] Indian partners of some insurance companies which are joint ventures between Indian and foreign insurance companies are approaching the government to change its policies and increase the foreign investment in the insurance sector.

C] Some private sector insurance companies in India which are a joint venture between Indian and foreign insurance companies are beginning to feel constrained by the capital adequacy rules that are presently in place and have approached the government with requests to review the same.

D] The prevailing ceiling of 26% on Foreign investment in Joint ventures between Indian and Foreign Insurance companies is proving an impediment to the expansion of Indian Insurance sector because of the inability of the Indian partners to augment their capital in the Joint Ventures to meet the capital adequacy norms.

14. The standard argument against abortion is the following practical syllogism:
a) The killing of human beings is prohibited.
b) A fetus is a human being.
c) The killing of fetuses is prohibited.
Hence, abortion is not allowed since homicide is prohibited. It seems obvious to question the result of the practical syllogism since one is able to argue against both premises. First, there are possible situations where the first premise could be questioned by noting, for example that killing in self-defense is not prohibited. Second, the second premise could also be questioned since it is not at all clear whether fetuses are human beings in the sense of being persons, although they are of course human beings in the sense of being members of the species of homosapiens. Consecutively, one would deny that fetuses are persons but admit that a young two-year-old child may be a person. Although, in the end, it may be difficult to claim that every human being is a person.

A] The standard argument against abortion equating abortion to murder of a person is weak as it follows a practical syllogism based on two premises, both of which are questionable.

B] The premises that the fetus is a human being and killing it is akin to killing a person is not logically sound.

C] It seems obvious to question the result of a practical syllogism when one is able to argue against the premises it follows from.

D] While homosapiens are of course human beings in the sense of being members of the species of homosapiens, it is not at all clear whether fetuses are human beings in the sense of being persons.

15. Deconstruction is always a double movement of simultaneous affirmation and undoing. To deconstruct is to take a text apart along the structural "fault lines" created by the ambiguities inherent in one or more of its key concepts or themes in order to reveal the equivocations or contradictions that make the text possible. For example, in "Plato's Pharmacy," Derrida deconstructs Socrates' criticism of the written word, arguing that it not only suffers from internal inconsistencies because of the analogy Socrates himself makes between memory and writing, but also stands in stark contrast to the fact that his ideas come to us only through the written word he disparaged. The double movement here is one of tracing this tension in Plato's text, and in the traditional reading of that text, while at the same time acknowledging the fundamental ways in which our understanding of the world is dependent on Socrates' attitude toward the written word.

A] Deconstruction is always a double movement of simultaneous affirmation and doing.

B] To deconstruct is to take a text apart along the structural "fault lines" created by the ambiguities inherent in one or more of its key concepts or themes in order to reveal the equivocations or contradictions that make the text possible.

C] Derrida deconstructs Socrates' criticism of the written word, arguing that it not only suffers from internal inconsistencies because of the analogy Socrates himself makes between memory and writing, but also stands in stark contrast to the fact that his ideas come to us only through the written word he disparaged.

D] Deconstruction is essentially an acknowledgement of inconsistencies within an argument that weaken it without making it untenable.

16. India's Supreme Court once gave an array of curious reasons about why an Indian woman would not make a false rape claim. In a 1983 judgement, the top court said that western and Indian women were vastly different. In the West, the judges said a woman may level a false allegation of sexual molestation against a man because she may be a "gold digger", suffering from neurosis, hold grudges against men, want to gain notoriety, be jealous and so on. "By and large these factors are not relevant in India," the judges said. The court said an Indian woman in the "tradition bound, non-permissive society" would not lie about being sexually assaulted because such an allegation would lead to her being socially ostracised, "risk losing the love and respect" of her husband and relatives, and if unmarried she would fear the rape might hamper her prospects of getting married. Mrinal Satish, a doctorate from Yale Law School who teaches at Delhi's National Law University, studied this and some 800 other judgements in all courts and found that myths and stereotypes often informed rape sentencing in India.

A] Myths and stereotypes often affect decision-making process across all Indian courts.
B] Indian and Western women are vastly different.
C] An Indian woman is more unlikely to make a false rape claim as compared to a western woman.
D] Even the Supreme Court accepts that India is a tradition bound, non-permissive society.

17. There has still been no formal medical investigation into the causes for local anaesthetic resistance in some cases, although there are a couple of theories. One hypothesis is that their tissue is slightly different from non-EDS patients and that might affect how the anaesthetic is absorbed. Local anaesthetics work by disrupting sodium channels. These channels conduct positively charged sodium ions – and with them the feeling of pain – to nerve cells. But there are still some questions over the nuts and bolts of this process. Filling in the details of that mechanism might explain why some patients find certain drugs – say, articaine instead of lidocaine – work better than others. One theory proposed for the heightened efficacy of articaine, for example, is that it is more soluble in fat (lipids) and therefore diffuses better through each nerve's membrane. It's also possible that the patients' nerves may be in slightly different places from the norm, with some evidence that dentists can overcome the problems by changing the location of the injection.

A] The resistance to local anaesthesia in some people may possibly be due to how their tissues may be different from others or their nerves maybe in different from usual places.
B] The resistance to local anaesthesia in some people may possibly be due to how their tissues may be in different places from the norm or their nerves maybe different from others.
C] There are two major theories regarding causes for local anaesthetic resistance in some people, formulated after extensive research.
D] Informal research suggests various theories as to why some people are more resistant to anaethesia than others.

18. "The only function of economic forecasting," JK Galbraith once said, "is to make astrology look respectable." With disarming honesty, the Bank of England's chief economist, Andrew Haldane, has admitted that criticisms that economic forecasts had been wrong before the financial crisis and wrong about the immediate impact of a 2016 Brexit vote were a "fair cop". The profession, he said, was facing a crisis of confidence. Mr. Haldane went on to describe the failure to understand the impact of the collapse of Lehman Brothers in 2008 as the profession's "Michael Fish moment" - when the weather forecaster suggested in 1987 there wasn't a hurricane on the way before record high winds devastated large parts of the south east of England.

A] The only function of economic forecasting is to make astrology look respectable.
B] Criticisms that economic forecasts had been wrong before the financial crisis and wrong about the immediate impact of a Brexit vote were well deserved.
C] The profession of economic forecasting in England is facing a crisis of confidence.
D] The failure to understand the impact of the collapse of Lehman Brothers in 2008 was a major mis-estimate and embarrassment to the economic forecasters.

19. Adjectives in English absolutely have to be in this order: opinion-size-age-shape-colour-origin-material-purpose Noun. So you can have a lovely little old rectangular green French silver whittling knife. But if you mess with that word order in the slightest you'll sound like a maniac. It's an odd thing that every English speaker uses that list, but almost none of us could write it out.
English speakers love to learn this sort of thing for two reasons. First, it astonishes us that there are rules that we didn't know that we knew. That's rather peculiar, and rather exciting. We're all quite a lot cleverer than we think we are. And there's the shock of realising that there's a reason there may be little green men on Mars, but there certainly aren't green little men. Second, you can spend the next hour of your life trying to think of exceptions, which is useful as it keeps you from doing something foolish like working. Actually, there are a couple of small exceptions. Little Red Riding Hood may be perfectly ordered, but the Big Bad Wolf seems to be breaking all the laws of linguistics. Why does Bad Big Wolf sound so very, very wrong? What happened to the rules?

A] Barring few exceptions, adjectives in English absolutely have to be in this order: opinion-size-age-shape-colour-origin-material-purpose Noun.

B] English is a complicated and funny language with interesting exceptions to unknown rules.

C] While most English speakers follow complicated rules unknowingly when they speak, almost no one is able to write down the same.

D] English speakers love it when they realize to their surprise that they know some rules that they didn't know they knew and that there are some interesting exceptions to such rules.

20. Liberated by prosperity but not fulfilled by it, more and more people are searching for meaning. From the mainstream embrace of once-exotic practices such as yoga and meditation to the rise of spirituality in the workplace to the influence of evangelism in pop culture and politics, the quest for meaning and purpose has become an integral part of everyday life. And that will only intensify as the first children of abundance, the baby boomers, realize that they have more of their lives behind them than ahead. The whole of humanity today needs the education coming from the cosmos, because, as it is known, the education of modern civilization is not complying with the universal creator's correct educational mandates. Many times it contradicts it without understanding it; today we have an imposed civilization personified by humanity's manipulators.

A] People have a sense of dissatisfaction that is leading them into spirituality. As the baby-boomer generation comes of age, it will see that spiritual training has become all the more relevant because the modern educational system has failed to live up to the times.

B] There is an abundance of material items but the spiritual is suffering as the material has failed to provide a sense of fulfillment. This quest for purpose in life is manifest is many ways today and the need for cosmic education, as against one contradicting the ethos of the cosmos, is being deeply felt.

C] As is evident by the rise of 'neo-spiritual' practices, an all-pervasive sense of incompleteness is driving people into spirituality. Since the education of modern civilization contradicts the cosmic educational mandates, spiritual training has become all the more relevant for the baby-boomer generation.

D] In the modern world, there is an abundance of material items but the spiritual self is feeling unfulfilled as the material has failed to provide a sense of fulfilment. Spiritual training has become all the more relevant because the modern educational system has failed to answer the demands of today.
